

DCSM Metal Roof Vent

The DCSM metal roof vent sits on TOP of the standing seam rather than on the flat section of the panel. This makes more sense because it minimizes the potential for leaking. The rear counter-flashing of the vent tucks underneath the ridge vent, and over top of the rear flange of the vent.

DETAILS:

- For DCSM metal roofing systems.
- Incorporated directly into our metal roof system.
- Made from the same gauge metal and color as your main roof system.
- Available widths are 12", 16" and 24" to match the width of the panels.
- Use in place of a typical range vent, plumbing vent, dryer vent etc.
- Available in Galvalume, aluminum and copper.
- Available in all DCSM standard colors.
- All DCSM products are made from **Galvalume** for greater corrosion resistance.

*Galvalume sheet uses an aluminum (55%) - zinc (45%) alloy coating that offers greater corrosive resistance, higher temperature oxidation resistance, and higher heat reflectivity than standard galvanized steel.
